RE: S.E. Cline Construction Inc. Engineering and Construction Services

To Whom It May Concern:

We are pleased to provide a reference for S.E. Cline Construction, Inc.

They have performed civil and marine construction projects for the Palm Coast Community Service Corporation and the City of Palm Coast since 1996. It should be noted that they have always remained competitive.

Many of these projects were jointly engineered by Cline and their client. The team approach of combining resources, offers a cost saving, quality, fast track design-build environment, resulting in major cost savings on the projects.

A few of the successful projects performed this way were L-4 Water Control Structure Replacement, Florida Park Drive Emergency Repairs, Crandall Cove Outfall Structure, Dredging of numerous City canals, construction of our reverse osmosis outfall line in the Intracoastal Waterway, and construction of Old Kings Road.

S. E. Cline Construction, Inc. is equipped and staffed to perform major site work, stormwater systems, sanitary sewer systems, potable water systems, reuse water systems, fire water systems, structural pile driving, dock/marina construction, seawall/bulkheads, and dredging.

We greatly appreciate Cline's efforts and responsibility in service to our community over the years.

The City of Palm Coast values this company as a local resource and as stakeholder in all of our projects.

Sincerely,

John C. Moden, PE
City Engineer
